                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            DNA coding for antigen HLA B27 - and diagnostic reagents contg. such DNA, antigen or antibody.

Claim 2: Page 4: 5pp; German.

Claim 2: Page 4: 5pp; German.

B27 gene, e.g. for assessing susceptibility to rheumatic disorders such as ankylosis spondylitis, or may be used to transform cells for prodn. of HLA B27. The HLA B27 may be used to detect HLA B27 antibody in human serum, or to produce mono- or polyclonal HLA B27 antibodies for use in immunoassay.

claim 1; p6; 13pp; German.
THE DNA may be used to detect the HLA-B 27 gene (opt. mutated) in human genetic material. The HLA-B 27 may be used to detect anti-HLA-B 27 antibodies in human serum. The antibodies may be used to determine HLA-B 27 levels in human serum, e.g. for diagnosis of rheumatic disorders, esp. ankylosing spondylitis.

Detecting pre-disposition to seronegative spondylarthropathies - Trom the absence of a C residue at a specific position in the 3'-flanking region of the HLA B27 allele
Claim 1; Page 52-56; 68pp; Bng1sh.
C Genetic predisposition to seronegative spondyloarthropathies (SNSA) is detecrining the absence of a cytosine nucleotide in the 3' flanking region (see also T61647-48) of an HLA-B3 gene at a position corresponding to nucleotide 4495 of the HLA-B37 consensus c sequence given in T61689. Probes and primers (see also T61640-46) based on this region can be used in diagnostic assays to detect the genetic predisposition to SNSA, and permit the distinction of B27+ individuals who are resistant to SNSA from B27+ normal individuals who are resistant to SNSA from B27+ normal individuals who are resistant to SNSA from B27+ normal individuals Sequence 6553 BP; 1443 A; 1619 C; 2017 G; 1474 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       analysis of expression of gene structure, and prodn. of mouse model of human disease

Disclosure: Fig 1; 8pp; Japanese.
The sequence shows the exon 2 alpha-1-domain of the human leukocyte antigen-Bw 52 gene. The complete gene may be introduced into non-human mammals, pref. rat or mouse, or their ancestors at the primary developmental biological step via transplantation into the zygote or embryo to generate transgenic non-human mammals incorporating the HiA-Bw 52 gene in both their germ cells and somatic cells. Transgenic non-human mammals contg. HA-Bw 52 are useful for the analysis of expression of the gene, its structure, and prodn. of mouse models of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        09-MAR-1993 (first entry)

Allotype specific monoclonal anti- HLA antibodies prodn. - using hybridomas derived from transgenic animals carrying HLA gene and immunised with HLA antigen of different allotype Disclosure; Fig 1 A-G; Z0pp; Engilsh.

The human HLA-B51 gene was injected into fertilised mouse eggs and then these introduced into the uterus of a pseudo pregnant mouse. The young were tested to ensure incorporation of the gene into the produces is young, seven of which carried the HLA-B51 gene. The transgeneic offspring were immunised with HLA-B51 gene. The transgeneic offspring were immunised with HLA-B51 gene. The spleen lymphocytes were fused with myeloma cells. Hybridomas

Example 7; Page 27; 34pp; English.
This oligonucleotide probe was immobilised on a solid support. probe carries a thiol group which is covalently coupled to a photochemically removable protecting group. Many probes can be
                                                                                                                                                                                                                                                                                                                                                                                        HIA-BW53 game, DNA probe and transformant cells - used for immunisation, identifying specificity of antiserum etc. Claim 1; Page 1; 11pp; Japanese.

Claim 1; Page 2; 11pp; Japanese.

Probes comprising part of the sequence can be used to identify class I genes. The DNA can be expressed for immunisation of animals and prodn. of monoclonal antibodies specific for the HIA-BW53 antigen. See also J03112485 and J03112486.

the gene is taken from the transposable element
Tn903"
immobilised on the solid support at one time and irradiation will remove the protecting group and allow the probe to hybridise with a complementary sequence. Selective irradiation in defined regions will activate only those probes required/chosen to be used in a given screening of a sample solution. The invention allows simultaneous screenings for many different sequences in a single

genetic material encoding one or more cistron(s) which express immunogenic or therapeutic peptide(s)

(laim 9; Page 42-43; Sopp; English.

This HLA-B7 antigen encoding plasmid was developed to incorporate many advantageous features, eg. the kanamycin resisitance gene. The eradication of two open reading frames encoding portions of SV40 viral proteins lowers the risk of tumourigenicity. The vector may also operate as a cassette into which distrons may be inserted and removed at will for the transcription and subsequent translation of peptides of interest. The vector is used partic. for the treatment of neoplastic disease, eg. melanoma, and provides enhanced gene delivery and expression in vivo.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                domain, derived
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  23-AUG'1995 (first entry)
pHLA-B7/Deta-2 microglobulin expression vector.
expression vector; pHLA-B7/Deta-2 microglobulin; heavy human HLA-B7;
light beta-2 microglobulin; class I major histocompatibility complex;
MHC; bicistronic mRNA; human leukocyte antigen; HLA;
covalently closed circular DNA; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           heavy chain mature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          region of a synthetic oligonucleotide which modifies this requiatory sequence to effect a higher level of expression of downstream sequences. The oligonucleotide removes a polyadenylation signal sequence originally found in the RSV DNA sequence."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       "tag= :

Carcinoembryonic antigen fragments - used in assays to determine the presence and amt. of the antigen in samples also contg. related antigens. Disclosure; page 4; 15pp; English.

CEA fragments can be used in assays to determine the presence and amt. of CEA in samples which also may contain related antigens including its normal cross-reacting antigen or the 128 kD antigen.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Carcinoembryonic antigen (CEA) derivs - useful as reagents in immunoassay for diagnosis of neoplastic diseases claim 4; Page 18; 30pp; English.

Claim 4; Page 18; 30pp; English.

Q71567 is the DNA sequence which encodes carcinoembryonic antigen (CEA) R60619. CEA is free from cross-reactive CEA-like antigens, it is antigenically indistinguishable from the solution form of CEA shed from tumour cells, and it is devoid of ethanolamine. R60619 can be used in a reagent composition for detecting neoplastic diseases in biological samples, or in an immunoassay process where it can specifically detect the presence of tumour cells in a biological sample e.g. blood.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                11-MAY-1995 (first entry)

BASE COUNT ORIGIN

```
double-stranded cDNA was ligated to Hind III adaptors (Pharmacia), digested with Not I and directionally cloned into the Not I and Hind III sites of the Lafmid BA vector. Library went through one round of normalization. Library constructed by Bento Soares and M.Fatina Bonaldo."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AIO07865 325 bp mRNA EST 25-JAN-1999
